

Here is some simple Actionscript to use:

---

Make your buttons link to other frames/swfs.

To get a button when clicked to play a particular frame type:

```
on (press) { ;  
gotoAndPlay (#) ;  
}
```

(Where # is a number of your choice you want to link to)

---

You may also use the following to link to a website:

```
on (press) { ;  
getURL ( " your linking url goes here.htm " ) ;  
}
```

---
